Bringing Mobile Map Based Access to Digital Audio to the End User

Robert Neumayer, Jakob Frank, Peter Hlavac, Thomas Lidy, Andreas Rauber

Vienna University of Technology **Department of Software Technology and Interactive Systems** Vienna, Austria {neumayer, frank, lidy, rauber}@ifs.tuwien.ac.at

www.ifs.tuwien.ac.at/mir

Motivation

- Digital audio collections are growing constantly
- Thousands of songs on portals and mobile devices
- Getting an overview of collections is difficult

(Mobile) Map Based Access

- Music analysis using **audio features** • Map based access for different platforms, similar music is clustered, forming
- Providing new interaction methods with the music collection using a touchscreen

• We miss more adequate ways of accessing music than merely scrolling through directories or hierarchical structures

islands

• Enabling access to large music collections on devices with limited means of interaction and storage capacities

Audio Features

- Features computed directly from audio files, e.g. mp3, wav or CD
- Using psycho-acoustic models
- Statistical Spectrum Descriptor (SSD)
- Rhytm Histogram (RH)
- Rhythm Patterns (RP)
- Range of different visualisations

Music Maps on Different Platforms

The PlaySOM application showing a music map with a trajectory

PocketSOM on Nokia 7710

Selected Features

Remote Control allows to send the created playlist with PocketSOM directly to a player located on a remote device.

Streaming is a simple way to bypass local storage limitations by streaming music from a remote server. The map data con be loaded from a remote server.

Zooming helps to get a more detailed view on the music map on small displays, and a more precise selection of music is possible

... finally played locally or sent to a remote audio player.
